

Now we've tweaked ingenuity again with a direct-connect USB plug...and, even more, user-friendly, extraordinary features!

With a proud reputation for product performance, we continue as a prime innovator and pacesetter in headset technologies to seek ingenious solutions in the development of superior and exceptional transcription headsets.

**Who says,
you can't
improve on
*ingenuity...***

We started, years ago, with the ingenious idea of a perfect headset for transcribing dictation.

We recognized the need for an exceptional headset that could provide hours of comfort and pristine clarity for transcriptionists in their workplace. We envisioned these headsets as being compatible with the many transcription products available. With that as our goal, we developed more than a dozen different headsets to meet the growing needs of today's transcriptionists in their ever-changing professional environment.

USB Headsets...

it just gets better

SPECTRA-USB

The lightweight, versatile, under-the-chin SPECTRA-USB features ergonomically designed sound chambers that are dome shaped to fit the contour of any ear while providing hours of total comfort, clarity and control throughout transcribing projects.

SH-50 USB

This stethoscope, hinged-style, headset features a center-mounted, detachable dynamic speaker button that delivers sound effectively through the chambers to both ears. Plastic ear tips fit comfortably into your ears to minimize any background noise or distraction.

SH-55 USB

The Y-shaped or wishbone-styled SH-55 USB uses the concept of vibrant sound distribution through both chambers from a centrally-mounted, detachable speaker button at the base of the headset. These headsets are fitted with cushioned earpieces that gently rest against the ears providing hours of comfort during transcription.

HP-USB

The ultimate in performance ... this premier binaural headset is designed with an adjustable and extendable double headband with dual 40 mm speakers engineered for professional auditory clearness. Add to this, a unique microphone tube design created for multi-angle microphone adjustments as well as assured long-lasting comfort with interchangeable foam and leatherette ear cushions, plus a single-side cord for tangle-free flexibility.

AL-60 USB

This sturdy hinged aluminum stethoscope-styled headset also features a dynamic speaker button at the base of the headset and clearly delivers the most resonant sound of any tubular headset. It is a continuing favorite of most professional transcriptionists.

SE-USB

For those who prefer a single earpiece headset to transcribe with, the SE-USB is the ideal choice. Simply slip it over your ear and listen directly from the speaker button that enables you to keep one ear to the transcription and the other ear free for phone calls and more.

and better

We've improved on our own ingenuity with extraordinary added features found on all our USB connect headsets!

1. Enjoy true plug and play connection with all of our USB headsets.
2. Take a stretch and move around! All headsets have a 10' cord to give you the flexibility to move about at your work station.
3. Take control! All of our USB headsets feature a stylish, powerful integrated digital controller.
4. Two ears or one ... the choice is yours!

and better!
